# INCITE

## The Art Of Visualization

### Incite Features

#### Plug n' Play Dashboards

Forget the confusing schemas and intimidating data warehouses. From uploading your data to using it to create visualizations, there is no step in between to complicate matters.

#### Zero Coding

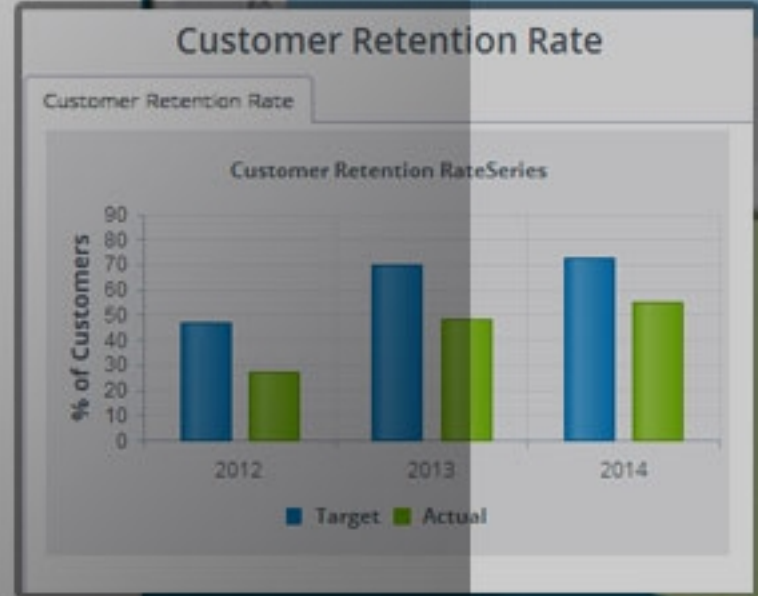

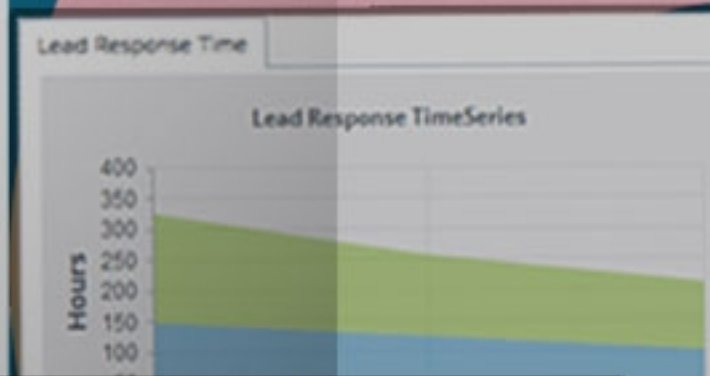

(No need to hire a team of developers to get started), just upload your raw data to start using it to create a visualization.

#### Seamless automated ETL

Extract, transform, load (ETL) the databases in the moments with optimum efficiency. Upload any data source to the dashboard, automate its retrieval, and use (and reuse) that data to build visualizations and dashboards for your team.

#### Wizard based Integration

Data and presentation are treated separately. Use a single data source to create a dozen data visualizations, or use a dozen data sources to create a single visualization.

## The Art Of Visualization

### Incite Features

#### Multiple Dashboard Support

Group the dashboards with tab support. Create multiple dashboards and caterorize them in the most effective way.

#### Security & Permissions

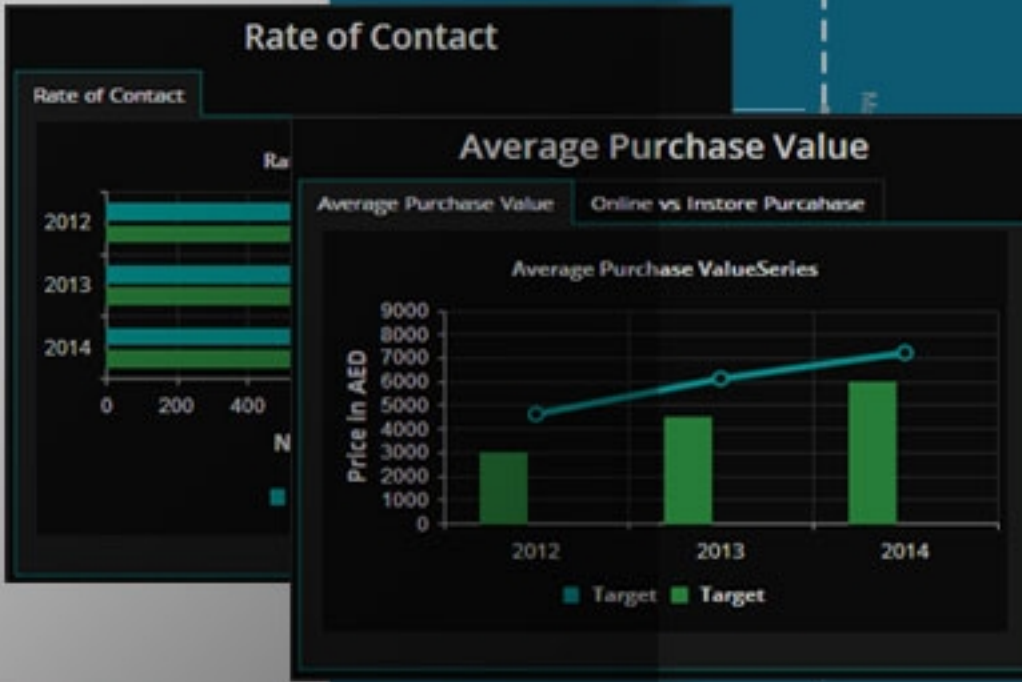

Well specified and easy to manage administrator panel. Manage access permissions and dashboard visibility.

#### Multiple Theme Support

Incite includes different types of visualizations so you can choose a visualization that will have the maximum impact on your dashboard.

#### Scheduled based update

A pre-sheduled job keeps dashboard feed updated time to time.

### Incite Features

#### Cloud and Onsite Implementation

Incite dashboards support cloud as well as onsite deployment. With cloud, you don't have to worry about infrastructure, maintenance and support, we will take care of everything. With Onsite deployment, you get unlimited users, intranet based access, and additional DMZ security.

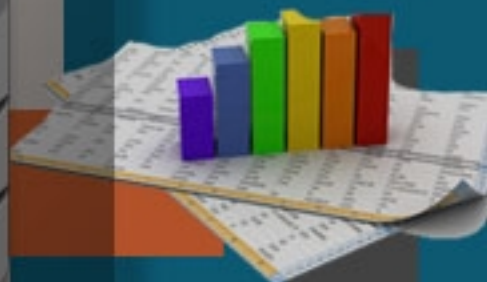

#### Built- in Scalability

Whether your organization needs 1 seat or 1,000 (or 10,000+), we can handle it. Our user and group management model is inherently scalable and simply managed

#### Integration with SQL, Oracle and Excel

Data Connectivity supporting Microsoft SQL , Oracle Databases and even excel sheets with seamless data synchronization
